

NetEffect Fact Sheet

September 2007

About NetEffect

NetEffect is a privately held network connectivity solutions company delivering high-performance, low-power accelerated Ethernet adapters. These products fully implement the IETF-ratified iWARP extensions to TCP/IP, a series of Ethernet extensions that allows Ethernet to scale to deliver high throughput for networking, fast access for storage, and low latency for clustering. NetEffect's unique and patented Virtual Pipeline Architecture enables solutions that provide scalable performance, minimal power requirements and a smaller dies size for lower costs. NetEffect's family of accelerated Ethernet adapters simplify data center management by enabling a single fabric for networking, storage and clustering applications, reducing total cost of ownership and complexity of data center operations. The NetEffect family of 10Gbps and 1Gbps iWARP Ethernet adapters are fully compatible with legacy Ethernet infrastructures.

NetEffect is a founding member of the iWARP Consortium and the OpenFabrics Alliance, a contributing member in the RDMA Consortium, a member of the DAT Collaborative, Ethernet Alliance, Blade.org, Fabless Semiconductor Association, and The Open Group.

Headquarters

NetEffect, Inc.
9211 Waterford Centre Boulevard
Suite 100
Austin, TX 78758
Main: (512) 302-0002
Fax: (512) 493-3399
